DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the control valve assembly" in line 10. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Sato.

The Sato reference discloses a method for stabilizing operating characteristics of a solenoid operated fluid control valve system 24 in a control valve circuit 25, the control valve system comprising a solenoid actuator having a stator coil 56, an adjustable armature 58 responsive to electromagnetic forces and an opposing spring force 57, and a fluid pressure regulator valve element 59, the method comprising applying a base

actuating current by the control valve circuit/assembly (see col. 4, line 16), establishing an electrical dither frequency for the base current to effect compliance of the control valve assembly as a function of electrical dither frequency as fluid pressure is controlled in response to a pressure command (see col. 5, lines 24-36), and changing the electrical dither frequency at regulated pressure values within a precalibrated range of regulated pressure values whereby instability of the valve assembly is avoided (see col. 4, line 23-col. 5, line 36 and note that when the pump speed and oil temperature are constant, dither frequency is based solely on discharge pressure).

Allowable Subject Matter

Claims 7-10 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Erickson reference discloses a similar solenoid operated pressure control valve system.
